Subject Index of Volume 174

Abrasion
  surface damage of SiC(W)/SiC by abrasion and indentation, 229
Abrasive processing
  rise in fatigue strength of Ti by extremely mild abrasive processing, 235
Abrasive wear
  three-body abrasive wear of ceramic materials, 21
  a model for the abrasive wear resistance of multiphase materials, 187
  the improvement of three-body abrasive wear of plain carbon steel by thermochemical treatments, 201
Additive–additive interaction
  antiwear/extreme pressure performance of graphite and molybdenum disulphide combinations in lubricating greases, 33
Additives
  additive–additive interactions: search for synergistic FM–EP–AW composition, 93
Adhesion
  adhesion and adhesional friction at the contact between solids, 9
Alloys
  scanning electron microscopic studies of worn-out leaded aluminium–silicon alloy surfaces, 217
Aluminium
  scanning electron microscopic studies of worn-out leaded aluminium–silicon alloy surfaces, 217
Antiwear
  additive–additive interactions: search for synergistic FM–EP–AW composition, 93
Argon implantation
  wear properties of argon implanted poly(ether ether ketone), 103

52100 Bearing steel
  the behaviour of block-like residual austenite of 52100 steel in sliding wear, 57

Carbides
  surface damage of SiC(W)/SiC by abrasion and indentation, 229
Carbon
  the surface morphology and structure of carbon–carbon composites in high-energy sliding contact, 111
  friction and wear of PAN/pitch-, PAN/CVI- and pitch/resin/CVI-based carbon/carbon composites, 129
Carbon steel
  the improvement of three-body abrasive wear of plain carbon steel by thermochemical treatments, 201
Ceramics
  three-body abrasive wear of ceramic materials, 21
  fretting wear of selected ceramics and cermets, 47
  cutting performance and wear mechanism of alumina-based ceramic tools when machining austempered ductile iron, 147
  wear mechanism of silicon carbide: new observations, 239
Cermets
  fretting wear of selected ceramics and cermets, 47
  the erosion–oxidation behavior of HVOF Cr_3C_2–NiCr cermet coating, 177
Coatings
  the erosion–oxidation behavior of HVOF Cr_3C_2–NiCr cermet coating, 177
Cobalt
  microstructural effects on the sliding wear resistance of a cobalt-based alloy, 81
Composites
  the surface morphology and structure of carbon–carbon composites in high-energy sliding contact, 111
  friction and wear of PAN/pitch-, PAN/CVI- and pitch/resin/CVI-based carbon/carbon composites, 129
  a model for the abrasive wear resistance of multiphase materials, 187
Contacts
  adhesion and adhesional friction at the contact between solids, 9
  the influence of surface roughness and oil viscosity on the transition in mixed lubricated sliding steel contacts, 71
  the surface morphology and structure of carbon–carbon composites in high-energy sliding contact, 111
  thermoelastic evolution of contact area and mound temperatures in carbon graphite electrical brushes, 137
Cryotribology theory
  reassessment of cryotribology theory, 163
Cutting
  cutting performance and wear mechanism of alumina-based ceramic tools when machining austempered ductile iron, 147

Dibenzyl disulphide
  thermal decomposition of dibenzyl disulphide and its load-carrying mechanism, 209
Dry sliding
  the role of porosity in the dry sliding wear of a sintered ferrous alloy, 155

Electrical brushes
  thermoelastic evolution of contact area and mound temperatures in carbon graphite electrical brushes, 137
Erosion
  a method for optimizing the particle flux in erosion testing with a gas-blast apparatus, 169
  the erosion–oxidation behavior of HVOF Cr_3C_2–NiCr cermet coating, 177
Extreme pressure
  additive–additive interactions: search for synergistic FM–EP–AW composition, 93
Extreme pressure additives
  thermal decomposition of dibenzyl disulphide and its load-carrying mechanism, 209

Fade
  fade and wear characteristics of a glass-fiber-reinforced phenolic friction material, 119

Elsevier Science S.A.

Fatigue strength
rise in fatigue strength of Ti by extremely mild abrasive processing, 235
Ferrous alloy
the role of porosity in the dry sliding wear of a sintered ferrous alloy, 155
Fretting wear
fretting wear of selected ceramics and cermets, 47
Friction
adhesion and adhesional friction at the contact between solids, 9
friction and wear of PAN/pitch-, PAN/CVI- and pitch/resin/CVI-based carbon/carbon composites, 129
Friction material
fade and wear characteristics of a glass-fiber-reinforced phenolic friction material, 119
Friction modifiers
additive–additive interactions: search for synergistic FM–EP–AW composition, 93

Gas blast
a method for optimizing the particle flux in erosion testing with a gas-blast apparatus, 169
Glass fibre
fade and wear characteristics of a glass-fiber-reinforced phenolic friction material, 119
Graphite
thermoelastic evolution of contact area and mound temperatures in carbon graphite electrical brushes, 137

Hardness
the variation of hardness and wear coefficient in sliding wear of copper and aluminum alloys, 63

Indentation
surface damage of SiC(W)/SiC by abrasion and indentation, 229
Iron
cutting performance and wear mechanism of alumina-based ceramic tools when machining austempered ductile iron, 147

Journal bearings
testing miniature, in particular polymer–polymer, journal bearings, 39

Lead
scanning electron microscopic studies of worn-out leaded aluminium–silicon alloy surfaces, 217
Load-carrying mechanism
thermal decomposition of dibenzyl disulphide and its load-carrying mechanism, 209
Lubricating greases
antiwear/extreme pressure performance of graphite and molybdenum disulphide combinations in lubricating greases, 33

Machining
cutting performance and wear mechanism of alumina-based ceramic tools when machining austempered ductile iron, 147
Metallic wear
the variation of hardness and wear coefficient in sliding wear of copper and aluminum alloys, 63
Microstructure
microstructural effects on the sliding wear resistance of a cobalt-based alloy, 81
Multiphase materials
a model for the abrasive wear resistance of multiphase materials, 187

Oil viscosity
the influence of surface roughness and oil viscosity on the transition in mixed lubricated sliding steel contacts, 71
Organomolybdenum compounds
additive–additive interactions: search for synergistic FM–EP–AW composition, 93
Oxidation
the erosion–oxidation behavior of HVOF Cr_3C_2–NiCr cermet coating, 177

Particles
a method for optimizing the particle flux in erosion testing with a gas-blast apparatus, 169
PEEK
wear properties of argon implanted poly(ether ether ketone), 103
Polymers
testing miniature, in particular polymer–polymer, journal bearings, 39
Porosity
the role of porosity in the dry sliding wear of a sintered ferrous alloy, 155
Pressure
antiwear/extreme pressure performance of graphite and molybdenum disulphide combinations in lubricating greases, 33

Residual austenite
the behaviour of block-like residual austenite of 52100 steel in sliding wear, 57
Roughness
the influence of surface roughness and oil viscosity on the transition in mixed lubricated sliding steel contacts, 71

Silicon
scanning electron microscopic studies of worn-out leaded aluminium–silicon alloy surfaces, 217
Silicon carbide
instability in the tribochemical wear of silicon carbide in unlubricated sliding contacts, 1
wear mechanism of silicon carbide: new observations, 239
Sliding
the variation of hardness and wear coefficient in sliding wear of copper and aluminum alloys, 63
microstructural effects on the sliding wear resistance of a cobalt-based alloy, 81
the surface morphology and structure of carbon–carbon composites in high-energy sliding contact, 111
Sliding wear
the behaviour of block-like residual austenite of 52100 steel in sliding wear, 57
Steel
the influence of surface roughness and oil viscosity on the transition in mixed lubricated sliding steel contacts, 71
Surface damage
surface damage of SiC(W)/SiC by abrasion and indentation, 229

Surface morphology
the surface morphology and structure of carbon–carbon composites in high-energy sliding contact, 111
Surfaces
scanning electron microscopic studies of worn-out leaded aluminium–silicon alloy surfaces, 217

Theoretical studies
adhesion and adhesional friction at the contact between solids, 9
Thermal decomposition
thermal decomposition of dibenzyl disulphide and its load-carrying mechanism, 209
Thermochemical treatment
the improvement of three-body abrasive wear of plain carbon steel by thermochemical treatments, 201
Thermoelastic properties
thermoelastic evolution of contact area and mound temperatures in carbon graphite electrical brushes, 137
Three-body wear
three-body abrasive wear of ceramic materials, 21
Titanium
rise in fatigue strength of Ti by extremely mild abrasive processing, 235
Tools
cutting performance and wear mechanism of alumina-based ceramic tools when machining austempered ductile iron, 147
Tribochemistry
instability in the tribochemical wear of silicon carbide in unlubricated sliding contacts, 1
Tribology
the variation of hardness and wear coefficient in sliding wear of copper and aluminum alloys, 63

Unlubricated sliding
instability in the tribochemical wear of silicon carbide in unlubricated sliding contacts, 1

Wear
fade and wear characteristics of a glass-fiber-reinforced phenolic friction material, 119
friction and wear of PAN/pitch-, PAN/CVI- and pitch/resin/CVI-based carbon/carbon composites, 129
Wear resistance
microstructural effects on the sliding wear resistance of a cobalt-based alloy, 81
